Mark A. Granatire Jr.

Springfield, VA https://github.com/Granatire97
markgranatire@gmail.com https://www.linkedin.com/in/mark-g-032960149/
412.862.5556

Software developer with 6+ years of experience building enterprise applications and data workflows, and a master's in data science projected for Spring 2026 (one course remaining). Strong foundation in data pipelines, descriptive analytics, intuitive interfaces, interactive charts, and reporting, with hands-on project experience applying these skills to hockey analytics using Python, SQL, Spark/PySpark, and BI tools.

PROFESSIONAL EXPERIENCE

Appian January 2026-Present

Software Developer, McLean, VA ***(Full-Time)***

- **Training & Certifications**
  - Completed Appian foundation training through Appian Academy.
  - Achieved **Appian Certified Associate Developer** (Feb 2026).
  - Quickly onboarded to a new low-code platform, reinforcing platform-agnostic engineering skills transferable to cloud data environments.

srcLogic, LLC August 2019-October 2025

Senior Software Developer, Vienna, VA ***(Full-Time)***

- **US Government Agencies & Internal Projects**
  Supported the development and enhancement of multiple Pega applications across federal agencies, focusing on security, automation, reporting, and user experience.
  - **Application Development & Enhancements:** Designed and enhanced case types, workflows, and UI components using **Pega + HTML/CSS** front-end styling; implemented system integrations, hotfixes, PDF generation, and email routing while ensuring compliance with SF-86 and Section 508 requirements.
  - **Process Automation & Optimization:** Built work queues, schedulers, and service rules to orchestrate automated workflows**,** and created reusable components to streamline case management and reduce manual workload across applications.
  - **Backend Logic & Data Operations:** Developed business logic and data transformation routines in Pega/Java, and wrote SQL queries for data extraction, validation, reconciliation, and performance tuning in relational databases.
  - **Reporting & Dashboards:** Delivered dashboards and reports using Pega's reporting framework and SQL-backed data pages, building repeatable analytics workflows to surface key performance trends and decision-making insights to stakeholders.
  - **Collaboration & Delivery:** Contributed to PI Planning, sprint reviews, design discussions, and production issue resolution across cross-functional agile teams, partnering with stakeholders to translate reporting needs into data requirements and deliverables**.**
  - **Prototyping & Innovation:** Built prototype applications for acquisition planning, background investigations, and internal controls, integrating external systems via SOAP-based services to support reliable data ingestion and improve usability through guided tours and milestone tracking.
  - **Leadership:** Mentored junior developers, improving code review quality and onboarding speed
- **Recruiting Lead focusing on Penn State University**
  - Led campus recruiting strategy across multiple hiring seasons, strengthening the early-career talent pipeline
  - Represented the company at university events and coordinated interviews with top candidates
  - Directed marketing, outreach, and candidate engagement campaigns to increase brand visibility and applicant volume
- **Training & Certifications**
  - Completed full-stack foundation training with Java, SQL, HTML, CSS, JavaScript
  - Achieved **Pega CSA 8 Certification** (Sept 2019) and **Pega CSSA 8 Certification** (Oct 2019).
  - Gained hands-on experience with Agile Scrum principles, including user stories, sprint planning, daily scrums, retrospectives, and backlog refinement.

DICK'S Sporting Goods May 2018-August 2018

Software Engineer Intern, Pittsburgh, PA (***Internship)***

- Created an SMS alert service that notified developers when important metrics crossed certain thresholds. Built using Java 8 with Spring Boot and communicating with the xMatters alerting software

- Created a web application that allowed internal employees to search for product and inventory information that was not easily accessible previously. Built using Java 8 with Spring Boot, Unix, Angular 6, and Angular Material
- Experienced Balanced Teams (Product Manager, Designer, Engineer) with Lean Development

HOCKEY EXPERIENCE

Capitals Academy Travel Team Arlington, VA | January 2020-March 2025

Hockey Coach

- **Head Coach (2022-2025):** Led the 14U AA/A teams, developing game strategies, conducting practices, and mentoring young athletes.
- **Associate Coach (2020-2022):** Supported the 14U AA/A teams with training sessions, game preparations, and player evaluations.

Gonzaga College High School Washington, DC | August 2022-March 2025

Varsity Assistant Coach

- Contributed to winning the 2023-2024 MAPHL Varsity AA Championship & 2024-2025 WCAC AA championship by assisting in coaching strategies, game planning, and player development.

Independent Scout Arlington, VA | July 2022-June 2023

Regional Scout

- Conducted in-person and video scouting to evaluate player performance and potential.

ISS Hockey Washington, DC | January 2020-July 2022

Regional Scout

- Recognized as ISS Mentorship Scout of the Year for 2020-2021, assessing talent and providing detailed player reports.

TECHNICAL PROJECTS

Personal Portfolio — React (Vite), JavaScript (In Progress)

- Building a React-based portfolio to develop and showcase interactive web applications
- Developing component-based UI features and learning state management and modern front-end workflows
- Implementing responsive layouts and reusable UI components

HALO Hackathon 2026 - Defensive Chaos Analysis (AHL, Sportlogiq Tracking Data) (Complete)

- Designed and implemented a **Defensive Chaos Episode (DCE)** framework using Sportlogiq tracking and event data to quantify **player reliability under sustained defensive-zone pressure**.
- Built episode-level and player-level metrics (episodes/60, unstable episodes/60, defensive-zone time/60) to support **coach-driven lineup and deployment decisions**.
- Translated complex tracking data into **interpretable, actionable insights** for hockey operations audiences, emphasizing exposure to pressure rather than isolated defensive events.

Hockey Analytics Web App — Flask + Plotly + Bootstrap + Heroku (Complete)

- Built a full-stack web dashboard utilizing the Stathletes Big Data Cup women's hockey dataset from 2021, using Flask for server-side routing and data processing
- Designed interactive visualizations with Plotly and implemented dynamic filters (team, player, event type, and rink zone) for exploratory analysis
- Styled UI with Bootstrap and deployed the application on Heroku, enabling public access and lightweight scalability
- Implemented data cleaning, aggregation, and feature-style transformations to support repeatable hockey analytics workflows.

NHL Faceoff Analytics Project — Python, SQL, Power BI (Complete)

- Conducting descriptive and diagnostic analysis on faceoff event data to evaluate team and player performance in different game situations.
- Building Python- and SQL-based data cleaning, transformation, and aggregation workflows to prepare raw faceoff data for analysis and reporting.
- Analyzing situational variables such as zone, handedness, score state, and deployment to identify performance tendencies and patterns.
- Communicating insights through structured notebooks and dashboards designed to support coaching and hockey operations discussions.

Master's Capstone Project – NHL Player Value & Salary Analysis (In-Progress)

- Designing an end-to-end analytical workflow to study relationships between player performance metrics and salary cap value.
- Identifying and sourcing public performance and salary datasets to support reproducible analysis.
- Developing data pipelines for data cleaning, feature construction, and exploratory analysis.
- Emphasizing interpretability and decision-support over black-box modeling.

Data Visualization & Machine Learning Labs — Loyola University Maryland

- Applied Python (Pandas, NumPy, Scikit-Learn) and R (ggplot2) to perform multivariate, classification, and regression modeling
- Built reproducible analytical workflows using R-Markdown and created interactive dashboards with Power BI and Tableau to communicate insights.

SKILLS

Data Engineering & Analytics:

- Python, SQL, Spark, PySpark, Data Pipelines, ETL/ELT Concepts, API Integration, Data Modeling, Reporting & Dashboards

Analytics & Visualizations:

- Power BI, Tableau, Plotly, Jupyter Notebooks, R, SAS

Software & Web:

- Flask, REST APIs, SOAP APIs, Java, JavaScript/TypeScript, HTML, CSS, Bootstrap, Git, Linux, React

Cloud & Platforms (Conceptual / Applied):

- Databricks-style workflows, distributed data processing, version-controlled analytics environments

Certifications/Badges

- Appian Certified Associate Developer
- Pegasystems Certified Senior System Architect (CSSA 8)
- Pegasystems Certified System Architect (CSA 8)
- Pega Certified Business Architect (CBA 8.4)
- Pega Customer Service Ready Badge
- Pega Platform Ready Badge
- Pega Business Architect Badge
- Pega Low Code Builder Badge
- Pega Express Delivery
- Loyola Data Visualization R / RStudio / RMarkdown Badge
- Loyola Python Badge

EDUCATION

Loyola University Maryland *(Part-Time)* — Baltimore, MD | Anticipated: Spring 2026
M.S. Data Science — 4.0 /4.0 GPA

Pennsylvania State University *(Completed)* — University Park, PA
B.S. Information Science & Technology, Design & Development Option — 3.66/4.0 GPA
Minor in Security Risk Analysis

Clearance: TS
